

## Silicone Scar Sheets Patch Transdermal Drug Patch

Item Number: ENSSP01

### Introduction

Silicone scar sheets is used on healed scars (hyperplastic scars and keloids) left on any part of the body due to surgery, car accident, cut or burn. It provides a physical barrier between the scar and the external environment, keeps the scar moist and clean, and helps to improve the overall condition of the scar, reduce the area, lighten the color, and play a therapeutic role. It can also be used in conjunction with other scar treatment methods to enhance the therapeutic effect. Scar patch is soft and smooth, transparent color, comfortable and durable, no irritation or allergy to skin. It is widely used in the repair of postoperative hyperplastic scars in obstetrics and gynecology, burn department, plastic surgery, general surgery and other surgical departments, as well as the treatment of keloid.
